## PROFESSIONAL SUMMARY

I am a skilled web developer, specializing in PHP, WordPress, and Laravel. Passionate about creating simple, effective, and enjoyable websites, I tailor each project to meet client needs. With expertise in SEO and a strong focus on cybersecurity, I ensure websites are both visible and secure. I am committed to exceeding client expectations and am ready to bring your vision to life.

## PROJECT HISTORY

- Amazon Review Site:**  
( May, 2024 - Continuing)  
**Description:**  
Developed a niche platform for managing intricate review processes, showcasing my expertise in handling form-intensive interfaces and data management.
- Photo Editing Portfolio Conversion:**  
( January, 2024 - Continuing)  
**Description:**  
A challenging project where I transformed a static site into a dynamic content management system, mirroring the flexibility of WordPress without using any CMS frameworks.
- Poetry Collection Website:**  
(January, 2023 - April, 2023)  
**Description:**  
An artistic venture that required meticulous attention to detail to create an immersive experience for poetry enthusiasts, complete with audio integrations and a powerful search engine.
- Visa Verification Service:**  
( May, 2022 - June, 2022)  
**Description:**  
A streamlined application that underscores my proficiency in crafting reliable and efficient systems for essential services, utilizing core PHP principles.
- Home Tutor Matching Platform:**  
Associated with Durjoysoft  
( August, 2020 - September, 2023)  
**Description:**  
Created a multifaceted website that facilitates the registration and profile creation of university students, provides separate dashboards for tutors and guardians, and incorporates e-commerce features for goods selling, alongside rental services. This ongoing project has evolved over two years to meet expanding client needs.
- Construction Company Portal:**  
Associated with Durjoysoft  
( February, 2020 - September 27, 2021)  
**Description:**  
Developed a sophisticated web platform for a construction company, enhancing workflow for material estimation, client relations, workforce coordination, and engineer oversight. The system features robust payment processing and automated document generation, improving efficiency. Implemented using core PHP and MySQL, the platform handles complex business logic and a structured database design, becoming integral to the client's operations.
